## Endangered Whitebark Pine Ecosystems in the Mountains of West Central BC

The Bulkley Valley Research Centre began whitebark pine research in 2007 by revisiting whitebark pine ecosystem plots that were established in the 1970s and 80s by the BC Forest Service through its BEC (biogeoclimatic ecosystem classification) program to learn how the resilience of these ecosystems was affected by the cumulative effects of mountain pine beetle, blister rust and a changing climate. The results of the initial study clearly showed that whitebark pine ecosystems and their dependent species were at significant risk and a restoration program was badly needed.

In 2011, the Bulkley Valley Research Centre began a program of applied restoration research. This report summarizes the 2011-2012 program of work, partly funded by Mountain Equipment Co-op (MEC). Comprehensive information on the full scope of the whitebark pine ecosystems project can be found at [www.bvcentre.ca/whitebark](http://www.bvcentre.ca/whitebark).

Additional Metadata: More info below

**Source URL:** The original source of the dataset. This is usually from the Bulkley Valley Research Centre or other institutions.

**Version:** Sometimes institutions or researchers will create multiple versions of a dataset. If so, the version number will be located here.

**Author(s):** Those that produce the data or are the author(s) of the resources.

**Maintainer:** The person or organization to contact with any dataset-specific questions or requests.

**Funding Agency/Agencies:** The organization(s) that provided funding for the creation of the dataset.

**Affiliated Institutions:** All academic or research institutions, government agencies, or organizations associated with the dataset author(s) and/or dataset production.

**Publication Year:** The year the data was published. If there are multiple resources with different publication years, the most recent year is recorded.
